* Corresponding Author

Journal of Platform Technology (JPT) aims to promote interdisciplinary research in platform technologies and other applied fields in mathematics, engineering and sciences to investigate specific methodologies and develop technologies that will contribute to the development of the future infrastructure.

We are honored to feature eight articles for the last issue in third volume of JPT as below:

- *Recognition of virtual written characters based on convolutional neural network*
by Byung-won Min
- *Architecture of Collision Avoidance System between Bicycle and Moving Object by Using V2V(X) Network*
by Bon-gen Gu
- *User Dynamic Access Control for Privacy Protection in Smart Home*
by Do-eun Cho, Si-jung Kim
- *Use of learning method to generate of motion pattern for robot*
by Dong-won Kim
- *Design Methodology of Integrated Architecture for S&T Knowledge Infrastructure*
by Yun-hee Kang, Young-chul Kim
- *Self-Adaptive Smart Grid with Photovoltaics using AiTES*
by Sung-sik Park, Young-beom. Park
- *Failure Rate of Solar Monitoring System Hardware using Relex*
by Hyun-sik An, Ji-hoon Park, Young-chul Kim

We believe that these articles have good quality and the relevance that we expect for developing JPT. Finally, we would like to thank all authors, reviewers, and members of the editorial board of JPT. Authors are welcome to submit papers relevant to the scope of the JPT (Journal of Platform Technology) at any time. The JPT submissions and reviews are conducted via journal submission system which is available at <http://jpt.ictps.org/>. We also welcome proposals for Special Issues, which should be submitted to the EiC (Editor-in-Chief; Prof. Dae-sik Ko). The journal's website is <http://jpt.ictps.org/> and online articles are available at the website in PDF format.
